(54) Title: DYNAMIC AND TRAFFIC-DRIVEN OPTIMIZATION OF MESSAGE ROUTING TO GEOGRAPHICAL ADDRESSES

(57) Abstract: The consists of a network device and a method arranged to deliver messages in a communications network comprising the steps: monitoring an arrival rate of messages destined for a geographical area within a short time period; establishing upon reaching a threshold, a multicast group for routing said messages to said geographical area, wherein network devices responsible for delivering said messages join said multicast group; delivering upon establishment of said multicast group said messages to said geographical area.
